

Fundamental Income
Net Lease Corporate Real Estate ETF

WHAT IS A REIT?

Real Estate Investment Trusts, or REITs, are companies that own or finance income-producing real estate in a broad range of property sectors – such as office buildings, shopping centers, and apartments. Investors may invest in REITs in the same manner as they access other asset classes, including the purchase of individual stock in publicly traded or private REITs, mutual funds, or exchange traded funds (ETFs). In all cases, the holders of REIT securities are entitled to a share of the income produced by the underlying real estate holdings.

WHY PUBLICLY TRADED REITS?

US REITs have historically shared characteristics with both equity and fixed income securities. This unique combination offers a number of potential benefits to investors. Due to its advantages, institutional investors have generally viewed real estate as a distinct asset class and allocated higher levels of their portfolio to REITs – historically 7-10%.

These potential benefits include:

- **Strong Historical Returns:** Since 1972, REITs have consistently outperformed both US equities and government bonds over longer-periods of time.¹
- **Reliable Source of Income:** REITs typically pass through 90% of their taxable income to their shareholders as dividends, serving as a dependable stream of income.[†]
- **Inflation Hedge:** The underlying properties owned by REITs and associated rent rates charged to real estate tenants have historically grown faster than the rate of inflation.
- **Diversification:** Due to their unique structure, REITs have historically offered diversification benefits through lower correlations to other asset classes.²

THE NET LEASE MODEL: NOT ALL REAL ESTATE IS CREATED EQUAL

The net lease real estate sector is unique in that these REITs are defined by a business model centered around a specific lease type, rather than property categories such as industrial, office, or retail. A net lease is a type of lease agreement made between the property owner and tenant which generally characterized by:

Minimal Expenses for the Property Owner

Tenants are responsible for paying the rent and most, if not all:

Property taxes | Insurance | Maintenance

Single Tenant Properties

Net Lease REITs focus on properties leased to individual companies

Long Lease Terms

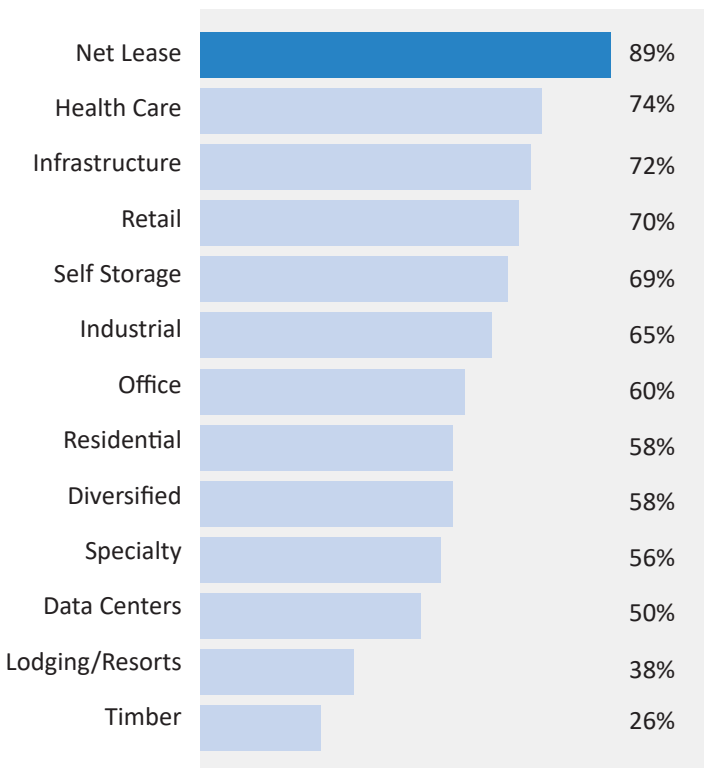

Lease terms are often 10-25 years

Higher costs borne by the tenant and long-term contractual lease payments have historically resulted in net lease REITs achieving the highest gross margins within the real estate sector.

THE NET LEASE MODEL: NOT ALL REAL ESTATE IS CREATED EQUAL

The net lease model is frequently used by US corporations across every sector, industry, and geography. The result for investors is a broad mix of tenants offering highly diversified exposure to US corporate real estate. Many of the underlying companies in publicly traded net lease REITs include household names which benefit directly from the everyday activity of US consumers.

FUNDAMENTAL INCOME NET LEASE REAL ESTATE ETF:NETL

An industry first, Net Lease Real Estate Exchange Traded Fund (ETF) was launched to provide investors access to a well diversified portfolio of net lease corporate real estate REITs. The fund tracks the Fundamental Income Net Lease Real Estate Index. Additionally, the fund is designed to offer investors:

Disclosures

Carefully consider the Fund's investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Fund's prospectus, which may be obtained by visiting www.netleaseetf.com. Read the prospectus carefully before investing.

Investments involve risk. Principal loss is possible. The fund may trade at a premium or discount to NAV. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The Index, and consequently the Fund, is expected to concentrate its investments in real estate companies. As a result, the value of the Fund's shares may rise and fall more than the value of shares of a fund that invests in securities of companies in a broader range of industries.

Investments in real estate companies and REITs involve unique risks, including limited financial resources, they may trade less frequently and in limited volume, and they may be more volatile than other securities. In addition, securities in the real estate sector are subject to certain risks associated with direct ownership of real estate and the risk that the value of their underlying real estate may go down. Companies in the Net Lease Real Estate sector may be affected by unique factors related to leasing properties to single tenants including dependence on the financial performance of its' tenants and lease terms related to rent escalations based on economic measurements. The fund may invest in foreign securities which involves political, economic and currency risks, differences in accounting methods and greater volatility. Investments in small and mid-sized companies have historically been subject to greater investment risk than large company stocks.

Fund holdings and allocations are subject to change and should not be considered recommendations to buy or sell a security.

Past performance does not guarantee future results.

Opinions expressed are subject to change at any time, are not guaranteed, and should not be considered investment advice.

Diversification does not ensure of protect against loss in a declining market.
